

Elective 3D/4D Ultrasound

See your baby like never before!

Newman Regional Health is excited to offer mothers the opportunity to get a sneak peek of their unborn baby with an elective 3D/4D ultrasound. From a yawn, a stretch, or the beating of your baby's heart, your 3D/4D ultrasound will allow you to take a peek at your baby's first movements in the womb. Imagine seeing your baby sucking on her thumb or waving his little hand at you. With our exciting technology, you can actually see what your baby is going to look like before he or she is born! We recommend your ultrasound be performed between the 26th and 32nd week of pregnancy.

Newman Regional Health uses 4D ultrasound technology to bring images of your unborn baby to life.

The 4D is an extension of the 3D ultrasound, with the added ability to capture the motion of the baby. With our GE Logic 9 3D/4D ultrasound system, you will witness the activities of your baby inside the womb that are

difficult to identify on only traditional 2D scanning. You can trust us with your precious moments, as your ultrasound will be performed by a Registered Ultrasound Technologist.

Your 30 minute ultrasound appointment is only \$125, which includes photographs of your baby and a CD filled with images and video clips. For an appointment, please call 620-343-6800, ext. 1167. For more information on this service, including answers to frequently asked questions, please visit our website, www.newmanrh.org, or call 620-341-7893.
